**New models**

## Reed

Magneto-resistive - Hall effect (Series CST, CSV, CSH only)

- » Series CST, CSV, CSH, CSG switches: integrated in the actuator profile, with or without M8 connector
- » Series CSB switches: for grippers CGA, CGP
- » Series CSC switches: for grippers CGLN
- » Series CSD switches: for grippers CGSN, CGPT, CGPS, RPGB, CGCN, CGZT
- » Series CSG switches: ATEX and UL certified

The magnetic proximity switches define the position of the piston in cylinders or grippers. When the internal contact is actuated by a magnetic field, the sensors complete an electrical circuit and provide an output signal to actuate directly a solenoid valve or a PLC. A yellow or red LED diode shows when the internal magnetic contact is closed.

The switches are available in two different versions - Reed with mechanical switching and with electronic switching - and they are subdivided into Hall effect and Magneto-resistive. The electronic versions are suggested for heavy duty with frequent operations and strong vibrations.

Magnetoresistive and Hall effect switches  
 BN = brown  
 BU = blue

### Connecting schemes in series

The 3-wire version of the Reed sensors has been designed to allow the connection of several sensors in series, as there is no voltage drop between the supply and the load. See connecting scheme. The voltage drop is 2.8V for the 2-wire Reed sensors and 1.0V for 3-wire Magnetoresistive and Hall effect sensors.
